

VUT: 2-way valve, PN 16

Features

- Regulation of fan coil units, air secondary-treatment units, heating zones and in combination with AXT 211, AXT 201, AXS 215S or AXM 217(S).
- Standard version flatsealing
- Adjustable Kvs value
- When the spindle is pressed in, the valve is closed
- Closing procedure against the pressure
- Valve with male thread as per DIN EN ISO 228-1, class B
- Valve body made of cast brass
- Nickel-plated brass spindle
- Plug with EPDM soft seal
- Stuffing box with O-ring seal

VUT015F200

Technical data

Parameters		
Nominal pressure	PN 16	
Valve characteristic	Almost linear	
Leakage rate	≤ 0.0001% of K _{VS} value	
Admissible ambient conditions		
Operating temperature	2...120 °C	
Operating pressure	Up to 120 °C, 16 bar	
Standards and directives		
Pressure and temperature data	EN 764, EN 1333	
Flow parameters	EN 60534 (page 3)	
Pressure Equipment Directive	2014/68/EU (fluid group II)	
	No CE label	
	article 4.3	

Overview of types

Type	Nominal diameter (DN)	K _{VS} range	Valve stroke (mm)	Connection	Weight (kg)
VUT010F200	10	0.2...1.6 m ³ /h	3	G½ B	0.18
VUT010F210	10	0.2...1.0 m ³ /h	3	G½ B	0.18
VUT010F220	10	0.2...0.63 m ³ /h	3	G½ B	0.18
VUT015F200	15	1.0...3.5 m ³ /h	4	G¾ B	0.28
VUT015F210	15	0.3...2.5 m ³ /h	3	G¾ B	0.28
VUT020F200	20	1.0...4.5 m ³ /h	4	G1 B	0.33

Combination of VUT with electric actuators

- ⚡ **Warranty:** The technical data and pressure differences indicated here are applicable only in combination with SAUTER valve actuators. The warranty does not apply if used with valve actuators from other manufacturers.
- ⚡ **Definition of Δp_s :** Maximum admissible pressure drop in the event of a malfunction (pipe break after the valve) at which the actuator reliably closes the valve by means of a return spring.
- ⚡ **Definition of Δp_{max} :** Maximum admissible pressure drop in control mode at which the actuator reliably opens and closes the valve.

Pressure differences with motorised actuators

Actuator	AXM217F200	AXM217F202	AXM217SF402

Setting of the K_{vs} values in m^3/h

Setting	1	2	3	4	5	0 (factory setting)
VUT 010 F220	0.2	0.4	0.5	0.55	0.6	0.63
VUT 010 F210	0.2	0.3	0.4	0.63	0.85	1.0
VUT 010 F200	0.2	0.63	1.0	1.3	1.5	1.6
VUT 015 F210	0.3	1.1	1.9	2.2	2.4	2.5
VUT 015 F200	1.0	1.9	2.5	2.9	3.1	3.5
VUT 020 F200	1.0	1.9	3.0	3.9	4.2	4.5

Function

When the spindle is pressed in, the 2-way valve is closed (passage A-AB). It is reset by spring force in the valve. The valve can be controlled to the "OPEN" or "CLOSED" positions with the thermal actuator for unit valves AXT 211. Used in combination with the "normally closed" version of the actuator, the valve's control passage closes in the event of a power failure. The valve can be controlled to any desired position with continuous actuator for unit valves AXS 215S. Depending on the position of the DIP switches, the valve is adjusted continuously with a control voltage of 0...10 V / 10...0 V, 2...10 V / 10...2 V. The control signal is then assigned to the valve stroke on a linear basis and produces the approximate linear characteristic in the valve. The positioner integrated into the actuator controls the actuator according to the setting of the DIP switches and positioning signal y. The continuous actuator positions the valve and, as soon as the position is reached, it stops. The valve can be controlled to any desired position with motorised actuator for unit valves AXM 217. In the case of type AXM 217S (with positioner) the valve is adjusted continuously with a control voltage of 0 to 10 V. Together with a thermal actuator, the approximate ON/OFF and subsequent linear characteristic enables the valve to be opened quickly.

Engineering and fitting notes

The control unit can be fitted in any position. To prevent any flow noise from being audible in very quiet rooms, the pressure difference over the valve must not exceed 0.6 bar. The valve is factory-set to the greatest K_{vs} value. When this K_{vs} value is adjusted (setting above on the valve), the stroke is reduced to almost 0.5 mm. So that impurities are retained in the water (welding beads, rust particles, etc.) and the spindle seal is not damaged, we recommend installing collecting filters, for example one for each floor or pipe run. Requirements for water quality as per VDI 2035. The stuffing box can only be replaced when there is no pressure on the valve. The stuffing box is sealed against the medium. Medium with coolant such as glycol with min. 16% or max. 40%. When insulating the unit valve, it may only be insulated up to the cap nut or the bayonet ring of the actuator.

Additional version information

Valve body in moulded brass with male thread to ISO 228/1, class B, flat seal on housing. Stuffing box with ethylene-propylene O-ring. No protective cap (or manual adjusting knob), stem is protected by the packing.

Material numbers as per DIN

	EN-DIN material no.	EN-DIN designation
Valve body	CW617N	Cu Zn 40 Pb2 according to EN12164
Valve seat	CW617N	Cu Zn 40 Pb2 according to EN12164
Spindle	1.4310	X10 Cr Ni18-8 according to EN188-1
Plug	CW617N	Cu Zn 40 Pb 2 according to EN12164
Stuffing box	CW617N	Cu Zn 40 Pb 2 according to EN12164
